Powering the Future with
Electrification

Modeling and Simulation
with Simulink

Designing and Simulating
Physical Models

Power Conversion for
Electronic Devices

Electric Motor Modeling and
Control

Battery Design and
Management

Srinivasa Manikanta Rajapantula

has successfully completed the online Professional Certificate

Electrified Systems Design Engineer

This Professional Certificate provides the background and hands-on experience to model, simulate, and design electrified systems using industry-standard workflows. Learners develop the ability to integrate power electronics, electric motors, and battery systems into system-level models, evaluate performance across operating conditions, and apply model-based design using MATLAB and Simulink to support engineering decisions. These skills represent in-demand capabilities for engineers working across automotive, energy, and electronics industries.

MathWorks Training

MathWorks Training

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
